## ABSTRACT OF THE DISCLOSURE

The present invention is related to a recording apparatus that records main data divided into a plurality of units of data reproduced by a reproducing apparatus and sent through a network. The recording apparatus includes a recording unit for recording a main data sent from the reproducing apparatus into a recording medium; communication unit for communicating with the reproducing apparatus through the network; detection unit for detecting a communication error of the main data received by the communication unit; notification unit for notifying the reproducing apparatus of an occurrence of a communication error based on a detection result of communication error provided by the detection unit. The recording apparatus further includes a control unit for controlling the recording apparatus to permit the recording again from a start position where recording of the main data started when said communication error is detected.
